

ABSTRACT

1 An encrypted audio decryption system for decrypting
2 encrypted audio sound. The system includes a hearing
3 device and a key FOB. The hearing device is adapted to
4 receive the encrypted audio sound, decrypt the encrypted
5 audio sound, and transmit signals corresponding to the
6 decrypted audio sound to a speaker of the hearing device.
7 The key FOB is adapted to transmit a decryption key to
8 the hearing device. The hearing device is adapted not to
9 decrypt the encrypted audio sound without receipt of the
10 decryption key, corresponding to the encrypted audio
11 sound, from the key FOB.
